What is the password for linksys router

Info updated March 22, 2022 The majority of Linksys routers have a default username of -, a default password of admin, and the default IP address of 192.168.1.1. These Linksys credentials are needed when doing a login to the Linksys router's web interface to change any settings. Since some of the models don't follow the standards, you can see those in the table below. Below the table are also instructions on what to do in case you forget your Linksys router password, need to reset your Linksys router to its factory default password, or the password reset doesn't work. Tip: Press ctrl+f (or cmd+f on Mac) to quickly search for your model number. Linksys default Password List (Valid March 2022) Instructions and common questions Have you changed the username and/or password of your Linksys router and forgotten what you changed it to? Don't worry: all Linksys routers come with a default factory set password that you can revert to by following the instructions below. If you decide to revert your Linksys router to its factory defaults, you should do the 30-30-30 reset as follows: When your Linksys router is powered on, press and hold the reset button for 30 seconds. While still holding the reset button pressed, unplug the power of the router and hold the reset button for another 30 seconds While still holding the reset button down, turn on the power to the unit again and hold for another 30 seconds. Your Linksys router should now be reset to its brand new factory settings. Check the table to see what those are (Most likely None/admin). If the factory reset didn't work, check out the Linksys 30 30 30 factory reset guide . Important: Remember to change the default username and password to increase the security of your router after the factory reset, as the default passwords are available all over the web (like here). I still can't access my Linksys router with the default password Make sure that you have followed the reset instructions correctly as the Linksys routers should always revert to their factory default settings when reset. Otherwise, there is always the risk that your router is damaged and might need to be repaired or replaced. Most Linksys brand routers have a default password of admin and a default IP address of 192.168.1.1, but some differ, as you can see in the table below. Evan Polonghi / Lifewire More help is below the table if you don't see your Linksys model below, the listed default password won't work, or you have another question. Version 1 does not require a username, while Version 2 requires admin as the username. [2] The router is controlled from the Linksys app, so you don't need to know the IP address or the router's username or password. [3] To access the router from a web browser, first set it up using the Linksys app, which is where you create a username and password for the router. You only have one choice when your Linksys device's default password or default username has been changed and you don't know what these are: reset the device to factory defaults. For most devices, perform a factory reset by pressing and holding the Reset button for at least 10 seconds (30 seconds on older models) and then unplugging and plugging back in the device. If that doesn't work, check the router or other device's manual to find advice for that Linksys model. You can find your device's manual in PDF format from Linksys Support. A factory reset also returns the IP address that's configured for the Linksys device back to 192.168.1.1, or whatever the default may be, but doing so could cause problems. If you only need your Linksys router's IP address, it's almost always the same as the default gateway that's configured for your computers and other devices that connect to it. If you have more questions about Linksys default passwords, need more help, or have questions about default passwords in general, check out the Default Password FAQ. Thanks for letting us know! Tell us why! The Router Password is an administrator password used when accessing the router's web-based setup page. The default Router Password for all Linksys Smart Wi-Fi Routers is admin. However, it is recommended that you change the default password to a new and personalized one to ensure that the router is safe from unauthorized access. NOTE: The Router Password is NOT the wireless network's password. QUICK TIP: If you forgot your Router Password, you can perform a hardware reset to restore your router to factory default settings. However, this also means that your router will need to go through the reconfiguration process. Updating the Router Password through the Linksys cloud account Step 1: Access your Linksys cloud account. Step 2: Click Connectivity. Step 3: Click Edit beside Router Password. Step 4: Enter your router's Current password. Then, enter the New password you want for your router and re-enter it in the Confirm new password field. On some Linksys Smart Wi-Fi Routers, you only need to enter the New password. Click on the icon to view your password. You can also enter an optional Router password hint. QUICK TIP: You can use character combinations (including special characters) in creating your router password. Step 5: Click the button. Step 6: On the pop-up box, click Yes. Then click Ok. Use your new password to access your router's settings and Tools such as the Guest Access and Parental Controls.
